

My name is Harsh Agrawal. I have completed my Bachelors of Engineering focused in Electronics and Telecommunication. Currently residing in Jersey City, I am very excited to get working with this course. I have previously worked with Google Developer Student's Club as the Lead for my undergraduate school, where I have worked with machine learning on multiple projects. I have played in and organized competitive programming contests leading Team Arena, the Codechef chapter of my undergraduate school where my primary language was "C++" and "Python". I decided to enroll in this course to understand the mathematics and inner workings behind some of the Machine Learning libraries and tools that I have been using to be able to implement them efficiently and use the tools to their fullest. The best advice I've ever received is that no matter how small, make sure you learn something new every day!

"I pledge my honor that I have abided by the Stevens Honor System."
